

A Family of Oxy-Defibrillators

SALI is a new-breed solution for out-of-hospital respiratory and cardiac emergencies. It is the first and only Automated Oxy-Defibrillator that combines oxygen therapy, airway management and defibrillation, besides real-time telemonitoring. SALI creates a virtual hospital environment at the scene and significantly increases the effectiveness of the medical treatment.

SALI

SALI enables real-time effective treatment in the out-of-hospital setting regardless of patient's condition, whether conscious or not. SALI is considered the "holy grail" of out-of-hospital medical emergency devices and it adheres to Basic Life Support and resuscitation international guidelines. SALI family includes tailor made solutions for public places, homecare, maritime and aviation.
